Who	Email-date	Member?	Comment	Current Text	Suggested Text	Status (Accepted / Rejected / Modified / Duplicate)	Notes
Joubin Jabbari	6/25/2021	Yes	OWASP Projects should live within the OWASP GitHub page			Reject	
Joubin Jabbari	6/25/2021	Yes	OWASP Projects must identify as OWASP Project in their branding			Accept	
Joubin Jabbari	6/25/2021	Yes	OWASP Projects should follow a licensing that would require for profit forks to provide back to the project. I believe this would be AGPL.			Reject	no consensus
Andrew van der Stock	7/26/2021	Yes	Permitted Open Source License "New projects must select an OSI-approved open source license. Existing projects should relicense where possible to an OSI-approved license by December 31, 2021. In all cases, projects should provide a GitHub LICENSE file. If in doubt, ask for a review of the existing license."			Accept	
Andrew van der Stock	7/26/2021	Yes	Contributor Agreement "New projects must use OWASP's standard contributor agreement](TBD) to ensure that all contributions are the original work of the contributor and/or they have permission to contribute that code or change. Existing projects that do not have a contributor agreement should adopt OWASP's by December 31, 2021. Existing projects with an existing contributor agreement are exempt from this policy as long as the contributor agreement doesn't conflict with OWASP's license requirements, copyright assignment requirements, and covers the risks of plagiarised code. If in doubt, ask for a review of the existing agreement."			Modified	Remove dates to keep policy evergreen
Andrew van der Stock	7/26/2021	Yes	Copyright assignment New projects must assign (C) to the OWASP Foundation. Existing projects, where possible, should assign (C) to the OWASP Foundation by December 31, 2021.			Reject	Legal issues should be considered and reviewed first - especially as it pertains to contributors
Andrew van der Stock	7/26/2021	Yes	Repositories	"It is required for new projects to use OWASP's official project source platform. Existing projects and new projects requiring an exception may request one."	"It is required for new projects to use OWASP's official project source platform. Existing projects should migrate to the OWASP official project source platform by December 31, 2021. If this is onerous upon existing projects, they can ask the Project Committee or the Executive Director for an annual exemption to this policy requirement."	Modified	Remove dates to keep policy evergreen. Removal of annual exemption (one time exemption is sufficient)

Andrew van der Stock	7/26/2021	Yes	Subdomains All projects that need subdomains will be granted <subdomain>.owasp.org. Existing domains that are not a sub-domain of owasp.org should redirect to the official owasp.org subdomain. Expenses will not be paid for any other domain held by a project.			Modified	Redirection assuming OWASP paying for subdomain
Andrew van der Stock	7/26/2021	Yes	OWASP Branding on sub-domains OWASP branding (including OWASP logo, links to the official owasp.org website, project home page, and repo) should be prominent on sub-domains or alternative domains maintained by the project. This branding should adhere to the [OWASP Branding Guidelines](https://owasp.org/www-policy/operational/branding.html).			Accept
